

## Appendix D

# AED Equipment List

Following is a sample list of equipment needed for an AED in the School program. The actual number of AEDs will be determined during the evaluation phase of the task force. The specific number of items below are stored with or located near each AED placed in a facility. Additionally, each rescuer should carry a face shield to perform rescue breathing prior to arrival of the AED and the mouth-to-mask device. The American Heart Association training program will provide instruction in all of the devices listed below.

Equipment	Quantity at each AED location	Purpose
<b>AED</b>	1	Ideally, there should be an AED placed within a <b>1 minute brisk walk</b> from all locations in the facility.
<b>Spare battery</b>	1	One spare battery should be stored with the AED as a safeguard for a primary battery failure.
<b>Telephone</b>	1	If possible, the AED should be placed adjacent to a telephone so that EMS can be called while rescuer retrieve the AED.
<b>One Safety Razor</b>	1	The razor is used to remove excess hair from the chest prior to placement of the AED electrode pads.
<b>One Towel</b>	1	A towel is used to dry the victim's chest (if needed) prior to placement of the electrode pads.
<b>Mouth-to-mask device</b>	2	Rescue breathing is provided through this mask to avoid direct mouth-to-mouth contact during CPR. Additionally, a face shield can be carried by each rescuer at the facility.
<b>Disposable gloves</b>	2	Disposable gloves prevent hand contact with victim's body fluids.
<b>Manufacturer AED Inspection Checklist</b>	1	Checklist for weekly evaluation of the AED.
